

Claim 7. (Original) A slide fastener according to claim 1, wherein:
said blocking member is made from semi-flexible material.

Claim 8. (Canceled)

Claim 9. (Original) A slide fastener according to claim 1, wherein:
said fastening devices are made of a plastic material.

b
Claim 10. (New) (Currently Amended) A slide fastener comprising:
a first strip of material and a second strip of material;
a first fastening device extending along and affixed to a longitudinally
extending edge of said first strip of material and a second fastening device extending
along and affixed to a longitudinally extending edge of said second strip of material;
a slider mounted for longitudinal sliding in a path along said first and
second edges of said first and second strips of material to control closing and opening
of the first and second fastening devices by, respectively, causing a locking of said
first fastening device to said second fastening device in a closing direction and an
unlocking of said first fastening device from said second fastening device in an
opening direction;
a blocking member directly or indirectly affixed to one of said first and
second strips whereby, when said first and second strips are interconnected by said
first and second fastening devices, said blocking member extends in a blocking
position across said path of said slider to interfere with movement of said slider in said
opening direction; and
